

Goldcrest

Regulus regulus

SEASONAL BEHAVIOUR

Recorded from November to March.

DISTRIBUTION

In recent years has been recorded in the provinces of Huelva, Seville and Jaén, though it probably winters in low numbers in all four provinces.

COMMENTS

Its tiny size and mouse-like furtiveness among the tree tops make it a hard species to locate.

H-17			

STATUS

Winter visitor.

ABUNDANCE

Rare though probably regular.

HABITAT

Known records correspond to dense woodland (pinewoods or riparian woods) and open areas with some trees (Holm-Oak *dehesas*).
