

Great Crested Grebe

Podiceps cristatus

SEASONAL BEHAVIOUR

Some spots have only passage and wintering birds; year round presence elsewhere.

DISTRIBUTION

Turns up in suitable sites of all four provinces. Most numerous in Aracena Reservoir, though breeding has not yet been proven. Where it does breed is on the reservoirs of Retortillo (1-2 pairs) and Arenoso (at least 4-7 pairs).

COMMENTS

Although birds are seen in summer on some reservoirs, even performing their eyecatching courtship display, this does not necessarily indicate breeding. As well as the wintering birds some immatures might oversummer without actually breeding.
