SEASONAL BEHAVIOUR

Seen all year.

DISTRIBUTION

Well distributed throughout Sierra Morena, both up in the sierra and down in *the campiña* without usually becoming abundant anywhere.

COMMENTS

Usually seen in pairs though hundreds-strong flocks might build up after breeding (summer) and in winter.

STATUS

Sedentary.

ABUNDANCE

Common.

HABITAT

A widely-roaming species that is hard to pin down to a specific habitat; easy to see, however, in pastureland and open dehesas with large sheep and pig herds. Nests on power-line pylons, cliffs, mine faces and trees.
