

Red-Rumped Swallow

Cecropis daurica

SEASONAL BEHAVIOUR

Arrives in mid February and most leave by September.

DISTRIBUTION

Well distributed throughout with notably high numbers in certain areas like Cerro del Hierro.

COMMENTS

Its liking for more open country than its town-nesting cousin has won it the local nickname of golondrina de campo (countryside swallow).

STATUS

Summer visitor and migrant.

ABUNDANCE

Uncommon.

HABITAT

Nests predominantly below river bridges in sunny valleys though also takes to mines and crags (cliffs, caves, overhangs and ledges, etc). Occasionally nests on farmsteads and even in town- and village-houses.
